

STRIP CURTAINS

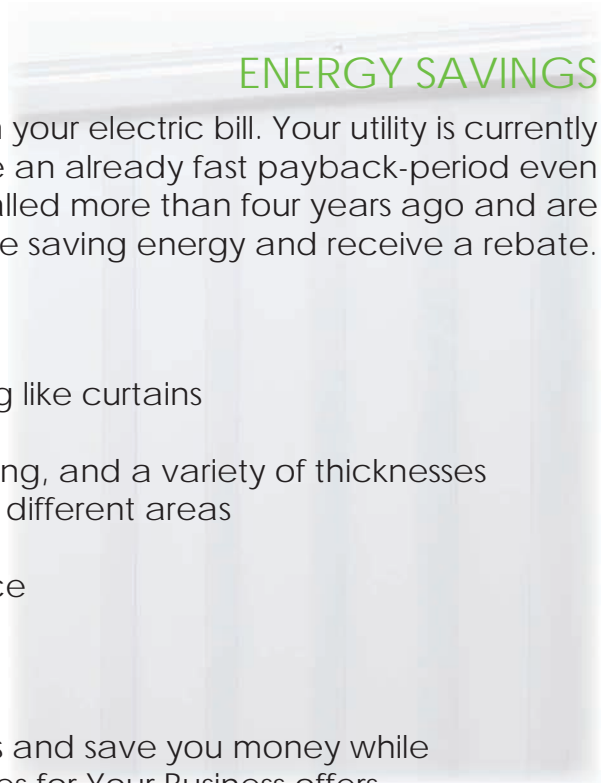

CURTAIN USAGE

Walk-in refrigerators
Walk-in freezers
Refrigerated warehouses

Although they're not high-tech — there's not a microchip in them anywhere — plastic strip curtains have been saving energy for more than 20 years. Installed in a doorway or refrigerated warehouse, they form a see-through barrier between two areas that are maintained at different ambient room temperatures. Strip curtains can be used to keep chilled air in or warm air out. They don't consume energy while saving it, and they're easy to install and to maintain.

This low-cost energy-saving action can help you save on your electric bill. Your utility is currently offering rebates on strip curtains, which can help make an already fast payback-period even faster. If you currently have strip curtains that were installed more than four years ago and are torn or missing strips, consider replacing to continue saving energy and receive a rebate.

ENERGY SAVINGS

FEATURES

- Are made of overlapping strips of flexible plastic and hang like curtains
- Are transparent
- Come in variable widths to accommodate any size opening, and a variety of thicknesses
- Prevent dust, dirt and other contaminants from moving to different areas
- Reduce sound transmission
- Help maintain consistent temperature in refrigerated space

SAVE ENERGY AND MONEY

Energy-efficient equipment can reduce your energy costs and save you money while conserving our natural resources. Energy Efficiency Rebates for Your Business offers rebates to customers for over 150 energy-efficient items including lighting, HVAC, refrigeration and food service equipment. An energy survey may help you identify overlooked opportunities for saving energy at your business. Find out how your business uses energy.
